

Eron Mustafa

Phone: (+383) 45384519 (Mobile) | **Email address:** eronmustafaa@gmail.com | **LinkedIn:** <https://www.linkedin.com/in/eron-mustafa/> | **Github:** <https://github.com/eronmustafa> |
Address: Prishtina, Kosovo (Home)

• SKILLS

Node.js | Next.js | Python | Prisma | PostgreSQL | React.js | TypeScript | Javascript | MSSQL | AWS Services | Problem Solving | Leadership | Docker | MySQL | MongoDB | Kubernetes

• EDUCATION & TRAINING

01/05/2026 - PRISHTINA, KOSOVO

COMPUTER SCIENCE AND ENGINEERING- UBT - UNIVERSITY FOR BUSINESS AND TECHNOLOGY

Number of credits: 180 | **Thesis:** Adaptive HoneyPot Architectures Using Intelligent Digital Systems for Cyber Threat Detection

• WORK EXPERIENCE

01/04/2025 - CURRENT

SOFTWARE ENGINEER / TEAM LEAD—ALGORETICO

- Lead and coordinate a development team while remaining hands-on with implementation, technical problem-solving, code quality, task planning, and production delivery.
- Develop and maintain a production healthcare platform serving thousands of users, enabling clinics to upload CT scans, manage patient orders and clinical documentation, and operate CRM workflows involving doctors, patients, and prospective patients.
- Build Node.js REST APIs backed by PostgreSQL, implement authentication and AWS S3 file storage, optimize SQL queries, and develop digital forms and appointment-management functionality.
- Develop user-facing features using Next.js and React, deploy containerized application services to production servers using Docker, and investigate and resolve production incidents.
- Develop Python-based RAG workflows for engineering projects, to process Autodesk Inventor files and extract technical specifications from mechanical designs and drawings.
- Transform extracted engineering information into vector embeddings for semantic retrieval and integrate multiple LLMs, including OpenAI models, Anthropic Claude, Qwen, and locally hosted models through Ollama, enabling users to receive context-aware answers grounded in uploaded engineering data.

01/10/2023 - 15/01/2025

SOFTWARE ENGINEER—DIGITAL HIVE L.L.C

- Designed and developed from scratch a full-stack swimming-pool management platform serving tens of thousands of users.
- Built backend services and REST APIs using Node.js and TypeScript, used MongoDB for data persistence, and implemented WebSocket communication for real-time application updates.
- Implemented subscription and membership management, online payment processing, payment-event webhooks, JWT-based authentication, and role-based access control for different types of users.
- Developed user-facing and administrative functionality using React, replacing manual Excel-based tracking with automated digital workflows and migrating existing customer and operational data into the new platform.
- Developed Python-based communication with RFID devices, integrating the hardware directly with the web platform to enable automatic member identification and connect RFID scans with membership information.
- Maintained the application on AWS, supporting testing, troubleshooting, and production issues.

01/06/2022 - 30/09/2023

SOFTWARE ENGINEER—ELBA TECHNOLOGIES L.L.C

- Contributed as part of a development team to software and business-process automation solutions for international clients, including Baker Tilly Denmark, following requirements and technical guidance provided by the team lead.
- Implemented assigned web-application features and automation workflows using Python, Microsoft Power Automate, and SharePoint to support the automation of manual internal processes.
- Developed full-stack features using React, Redux, Node.js, and Express, and worked with REST APIs, SQL and NoSQL databases, and third-party application integrations.
- Implemented assigned features for an internal call-management and customer-support platform for a Netherlands-based client, working with Twilio to handle inbound calls and connect call interactions with lead and customer records.
- Developed functionality that allowed customer-support representatives to capture and update customer information through call recordings and manual data entry.
- Worked with AWS S3 for cloud-based file storage and contributed to application testing, troubleshooting, bug fixing, and workflow maintenance.

● **VOLUNTEERING**

01/01/2021 - 31/05/2021

Assistant Instructor The main responsibility was to assist in the classroom and help the lead trainer in modules such as Web Front End Development and Robotics

● **CERTIFICATIONS**

Udemy

Python for Data Science and Machine Learning Bootcamp

Skilled in Python for data science and machine learning, using NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, and Spark for data analysis, visualization, modeling, and big data processing.

Udemy

NodeJS - The Complete Guide (MVC, REST APIs, GraphQL, Deno)

Completed a comprehensive Node.js course covering back-end development, MVC architecture, REST APIs, GraphQL, authentication, database integration, and Deno fundamentals through practical project-based learning.

A.U.K (RIT) - Training and Development Institute

Programming Essentials in Python

Essential knowledge of Python programming language.

Udemy

Modern React with Redux

Completed a React and Redux course focused on building modern, interactive front-end applications. Covered component-based development, state management, routing, hooks, forms, and practical application structure.

A.U.K (RIT) - Training and Development Institute

Web Development

Completed a web development course focused on building responsive and user-friendly web applications. The course covered front-end and back-end development, database integration, RESTful APIs, and practical project implementation.

Cisco

Introduction to Cybersecurity

Completed an introductory cybersecurity course covering basic security concepts, common threats, risk awareness, and best practices for protecting systems and data.

Digital School

"CODE"

For the demonstration of knowledge in basic concepts in the field of Computer Science

Cisco & A.U.K (RIT) - Training and Development Institute

CCNA 1-3

Knowledge of Network Connectivity and Communications, Switching, Routing, Wireless Essentials, and Enterprise Network Storage Architecture.
